The EST project for testis from Duroc was granted by Council of

Agriculture, Taiwan, Material with normal function was tested and
heat stress experiments of animals were conducted by Divisions of
Biotechnology and Animal Resources, Animal Technology Institute

Taiwan (ATIT). Library was constructed and EST clones were

sequenced by Graduate Institutes of Veterinary Microbiology and
Department of Animal Science, National Chung-Hsing University.

Bioinformatic work was conducted by a network from ATIT, National
Cheng-Kung University, and Chung-Hua University. The sequences

scolled and alt_trimmed with phred v0.020425.c. Vector identified
and masked by Gross_match. Sequences were cleaned of vector,
adaptors and repetitions.

/note="Organ: testis, Vector: pSPORT1; Site_1: NotI;
Site_2: Sall; Material with normal function was tested and heat stress experiments of animals were conducted by Divisions of Biotechnology and Animal Resources, Animal Technology Institute Taiwan (ATIT): First strand cDNA was synthesized by using nick translational replacement of the mRNA. Double-strand cDNA was added with Sall adapter, then digested with NotI and cloned into the NotI and Sall sites of pSPORTI vector."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel
                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GSS 02-OCT-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              electrophoresis. ```

TITLE

```
inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent B. coli XL10-GOld (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                            CR762707
